

CUSTOMER BEHAVIOR ANALYSIS USING SQL

PROJECT OBJECTIVE:

Analyze customer transactions and behavior to uncover insights such as purchase patterns, revenue, top products, and repeat vs new customers using SQL queries.

DATA SET DESCRIPTION:

Customers Table: Customer details (ID, name, gender, age, city, state, signup date)

Products Table: Product details (ID, name, category, price)

Orders Table: Order details (order ID, customer ID, order date, status, total amount)

Order Items Table: Individual items in orders (order item ID, order ID, product ID, quantity, price)

Payments Table: Payment information (payment ID, order ID, method, status)

SQL QUERIES / ANALYSIS PERFORMED:

1. Total customer:

	total_customers	
	bigint	
1		3

2. Orders per customer:

	city	num_customers
	character varying (50)	bigint
1	Mumbai	1
2	Chennai	1
3	Bangalore	1

3. Total revenue:

	total_revenue	
	numeric	
1		2196.00

4. Orders with customer name:

	order_id	name	total_amount	order_status
	integer	character varying (50)	numeric (10,2)	character varying (20)
1	1	Rubi	1298.00	Delivered
2	2	Arun	399.00	Delivered
3	3	Rubi	499.00	Pending

5. Top customer by total spending:

	name character varying (50)	total_spent numeric
1	Rubi	1797.00

6. Count order per customer:

	customer_id [PK] integer	name character varying (50)	total_orders bigint
1	3	Meera	0
2	2	Arun	1
3	1	Rubi	2

7. Repeat vs. new customer:

	customer_type	num_customers
1	New	2
2	Repeat	1

KEY INSIGHTS / RESULTS:

Total customer : 3

Total revenue : 2196

Top customer by spending: 1797

TOOLS USED:

postgresql/ pgadmin (Database & SQL queries)

Gamma (pdf & presentation)
